FROM ASKING TO DOING

Introduction to Claude Code for everyone in JF

Nelson Amaya
nelson.amaya@jacobsfoundation.org

“I just want to grasp basic concepts and not feel intimidated by code, but learn how to speak the language a little so that I can actually use these tools to build something.”

— A VOICE IN THE ROOM

That feeling is the right starting point.

- Nobody becomes a programmer in a workshop.
- But **everyone** can learn to direct a capable assistant.
- The gap between *having an idea* and *building something* just got tiny.

Quick show of hands

Hands up if you know what each of these is — no wrong answers, this just tells me the room.

- A **Skill**?
- An **Agent**?
- A **Hook**?
- A **slash command**?
- A **Sandbox**?

What changed?

Before LLMs tools

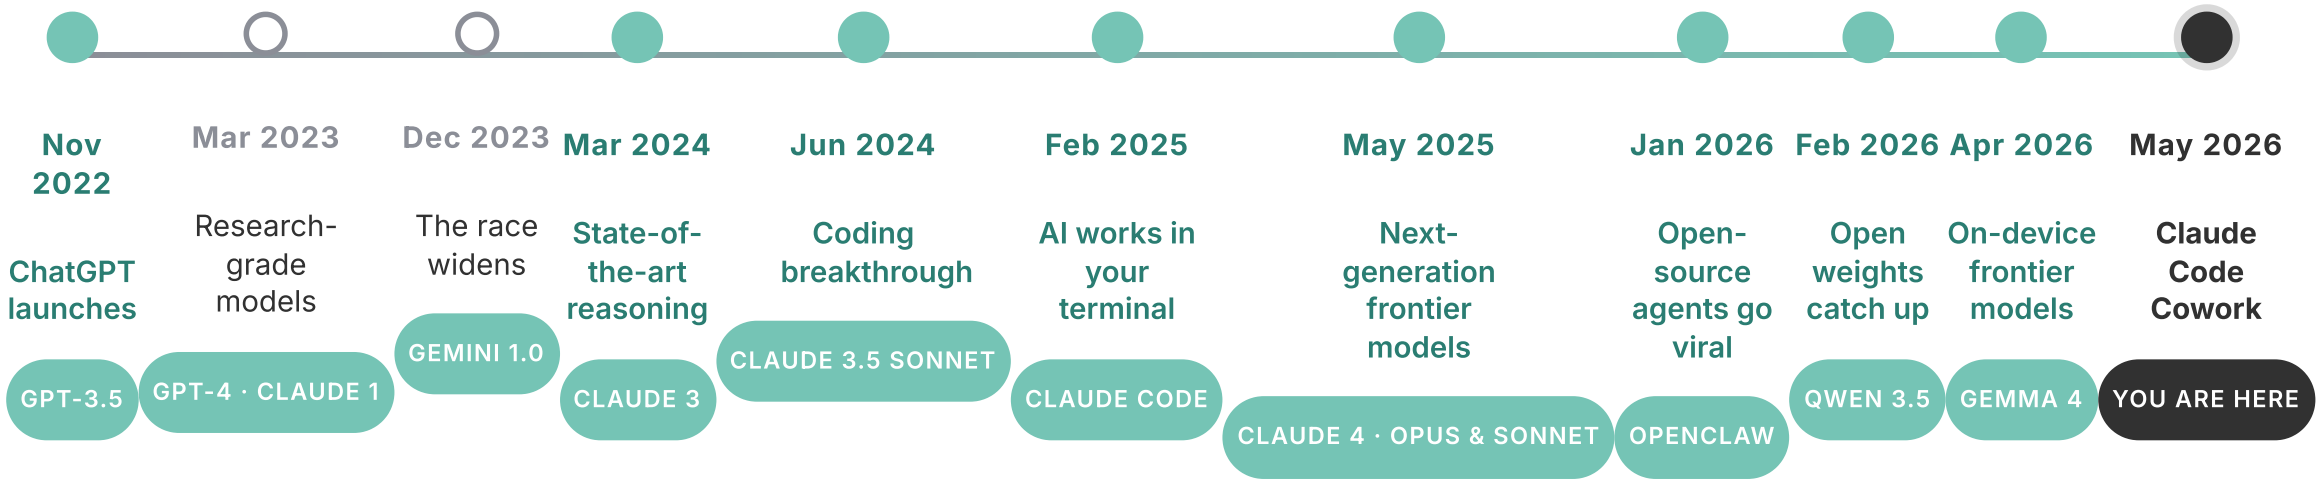

- You needed to know the syntax
- You needed to know the right library
- You needed to debug line by line
- *Specialists only*

Today

- You describe what you want
- **The tool figures out the syntax**
- You review and iterate
- **Available to everyone**

2.5 years of change

How do we catch up?

SESSION 1 · BASIC

Turn a Proposal into an RFC Presentation

Claude transforms your thinking into a communication tool in seconds.

SESSION 2 · INTERMEDIATE

Multi-Input Summary Report

You have a bunch of documents you want to synthesize, Claude will help you using `skills`

SESSION 3 · ADVANCED

Organisational Strategy Review

Enhance your team with a `researcher` and a `reviewer` that help you produce better material.

Three ways to work with Claude

Chatbot (app or browser)

```
> Summarise this report.

> Make it shorter.

> Now add a conclusion.
```

Short, iterative prompts. You hold the context in your head and guide each step manually.

YOU DRIVE EVERY STEP

Skills (slash commands)

```
/summary-report inputs/
```

A long, detailed instruction written once — stored in `CLAUDE.md`. One command runs the full workflow. Claude sees the whole conversation.

YOU DEFINE, CLAUDE EXECUTES

Agents (subprocesses)

```
/researcher → /reviewer
```

Each agent starts fresh — no memory of prior work. Prevents self-bias: the reviewer never saw the researcher's findings being built.

ROLES SEPARATED, BLIND REVIEW

Session 1 · Basic

WHAT YOU'LL DO

Turn a proposal document into a slide deck

You provide a `.md` or `.docx` proposal. Claude reads your brand file, builds slides, writes speaker notes — and iterates on your feedback.

Key concept: Claude reads files and transforms them.

Session 2 · Intermediate

WHAT YOU'LL DO

Synthesise mixed inputs into one report

Meeting notes, spreadsheets, field reports, PDFs — dropped in a folder. Three slash commands collect, synthesise, and assemble a formatted Word report.

Key concept: Skills are composable and chainable.

Session 3 · Advanced

WHAT YOU'LL DO

Two agents review your strategy — separately

A **Researcher** gathers evidence without forming opinions. A **Reviewer** critiques the strategy without re-reading the source — reducing bias. Every finding is traceable to a source.

Key concept: Separating roles produces more reliable analysis.

The skill that transfers

It is not **writing code**.

It is not **knowing the tools**.

It is **describing what you want, clearly** — and knowing how to evaluate what comes back.

3

sessions to practise exactly that skill

How each session runs

Every session follows the same three steps — so you know when to listen, when to watch, and when to ask.

1

A common problem

We start with a real situation from the organisation — the kind of task someone on your team is doing this week.

PRESENT THE PROBLEM

2

Solve it with Claude Code

Live demo. We show how Claude Code tackles it — and iterate in front of you so you see how the conversation shapes the result.

SHOW THE SOLUTION

3

Your questions

Time at the end of each session to ask anything — about what you just saw, or about your own work.
